

# THE YACHT

## ANNUAL REPORT 2008/2009 *report*

Issue 100

January 2009

# 100<sup>th</sup> issue

designer goes here to be on top of  
new problems, and the yard  
can have a great benefit selecting  
a relevant architect.

When asked about the market design  
situation, his opinion is in  
the evolution of the house  
system. His system was used in  
his company, this means typical  
to consider the entire line of  
commercial items replace to  
be sure of the dimensions, costs  
and final quality product and,  
most importantly, of all, of the  
level of final yacht delivery.  
The architect and designer  
will have to be more than just  
creative men; they must have  
knowledge of all the items of  
yacht building!

### Goals

The market is growing, mainly  
with entry-level yachts, and  
the yards which are able to  
provide the quantity quality  
are very few. Most of  
the Italian yards suffer from  
this. We can't make any  
long-term investments in quality, so no  
one will think that the only way  
to get lower prices, and  
by doing this to improve the  
product. Many yards are  
looking for new places in the  
Mediterranean area to build  
but are unconvincing, but  
they have to come to  
Italy to complete the process.

They don't agree with this, the  
only system to improve the  
final production by it is to  
improve the product to their  
own country. The architectural  
and design team in Italy has a  
difficult job to do in Italy, but it  
has to be done in Italy, as the  
market requires.

The technology is the basis for  
the design, not necessarily new  
high-tech systems, but also

The technology that will help us  
designers and builders to work in  
a different way.

The next generation of yards  
will pay more attention to  
architectural aspects, to improve the  
structure and to include the  
use of recycled materials with the  
creation of new treatments. The  
technology will help us to create a  
designer's product following the client  
and the use of the new technologies  
at the company. This, if done in an

a large yard, you could have the  
chance to use combined with the  
whole, with architectural solutions  
that meet the state of technology.  
The main aim of designers will  
finally start and we will have shared  
working relationships with the  
architects, which is what we are  
looking for. To design and build  
yachts that will operate with the  
best and are aesthetically sound.

PCM Pantographic Superyacht Doors

Cleanse Clean

"No matter how advanced your yacht is,  
PCM's easy to open pantographic doors  
will add a new level of smooth and  
elegant functional style..."

### Luigi L. - Italstyle Yacht Design & Naval Architecture Design

To bring the market grow it is  
necessary to follow the taste of  
clients and the style of the time.  
However, during the preliminary

phase of study the architect has  
to think about the construction  
process, so as to let the  
construction system be simple,  
The exterior design of the yacht  
has to meet the taste of clients,  
but we have to consider that  
the shapes have to be realized  
in an easy way, so the final  
selection of the color is really  
very important. At this moment,  
the part of the design work is

the help of the architect and  
designer can make the difference  
in the construction system  
and the final part of the  
yacht, as well as the number of  
yachts that the yard can build in  
a year - not only the level of  
materials and shapes, but also  
the process of construction and  
the sequence of assembly work is  
the part of the design work.
